

2-EGs / 3-EGs / 4-EGs

By SpaceF

Addon for KrOn

THESE DEVICES REQUIRE A KRON KEY

These devices are **midi-controlled envelopes** for audio signals.

They come in various channel count, to adapt your need and save DSP where needed.

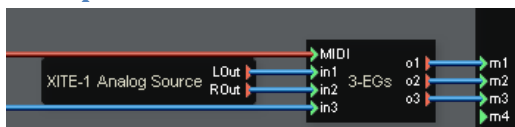

These devices are **multi-timbral**, meaning that each envelope can react to a different midi channel. Moreover, the device can be controlled by **Midi CCs on an independent midi channel**.

You will find presets and “**sub-presets**” for comfort, letting you save parts of the device for quick recall. For example, you probably have 1 or two midi setup, or use favorite colors: save those once for all and recall them at will.

The output presets allow linking several channels to an envelope, or switching various setups on the fly.

Applying different envelopes at different moments of a song will bring life and variation to your tracks. This can be done with the main preset list too of course.

Example of connection:

Connect the envelopes between the audio signal and a mixer, and don't forget the midi connection.

Parameters' functions

1. Midi Channel for Midi CCs and program changes.
2. Midi channel of that channel
3. Color selector (change the decoration of the channel)
4. Envelope is “On” or “Bypassed”
5. ADSR parameters with Slope (Sl.)
6. Tx Time Expander: divides or multiplies the ADSR values by 10. Center=Off.
7. Assign different envelopes to different channels.
8. Sub-presets for Midi, Colors or Outputs parameters.
